# Preface

Design of complex artefacts and systems requires the cooperation of multidisciplinary design teams. The Ninth International Conference on Computer Supported Cooperative Work in Design ( CSCWD 2005) provides a forum for researchers and practitioners involved in different but related domains to exchange research results and discuss key challenges. The major topics of CSCWD 2005 are the following:

- Artificial Intelligence Approaches
- Computer Support Systems
- Coordination Methods
- Data and Information Management
- Design Management, Methods and Tools
- E-learning
- Grid Computing
- Groupware and Web-based Technologies
- Intelligent Agents and Multi-Agent Systems
- Manufacturing Processes
- Semantic Web and Knowledge Management
- Virtual Reality and CAD
- Workflow Management

The proceedings contain 212 papers in two volumes. The total number of submissions was more than 280 papers from 14 countries. The papers are grouped in the proceedings according to their content to facilitate parallel session organisation and discussion. We would like to thank all members of the steering and programme committees who helped in conference promotion and the paper review process. We are also grateful to our sponsors for their role in promoting and supporting the conference. We are especially grateful to the authors who contributed to this conference by providing most interesting accounts of their research endeavours. Thanks too to the members of the various organising committees for their efforts to make this conference successful, particularly members of the Distributed Systems and Modelling Research Group at Coventry University.
